

SEP.DLF-0019 and SEP.DLF-0020 are pre-separators with cyclone for the safe collection of fine dust and can be used with any Delfin vacuum, in order to collect big quantities of material and increase the collection capacity of the vacuum.

The Endless Bag collection system is especially suitable in all those applications that involve the collection and disposal of hazardous and toxic materials (solid and dust), which can be dangerous to the operators' health. Therefore, they need to be disposed of safely, preventing any contact with the people and their spread in the work environment.

Endless bag - spare parts

- TA.0245.0000 - standard
- TA.0677.0000 - antistatic (required to handle flammable / explosive dust)
- TA.0244.0000 - heavy duty (thicker and stronger)

SEP.DLF-0019

SEP.DLF-0020
