

SEP.DLF-0067

Preseparator 1000 lt

SEP.DLF-0067 separator increases significantly the collection capacity of a vacuum cleaner, thus increasing the autonomy of work.

The separators are made of thick painted steel, epoxy painted and mounted on 4 wheels, two of which braking. The chassis has intakes for lifting and moving by means of fork lift truck. The collection skip can be easily emptied through a tilting movement, operated by sturdy levers and controlled by safety blocking devices, in order to prevent too abrupt discharge.

The suction inlets are placed on top of a cyclone, installed on the top of the separator; the two suction inlets are \varnothing 4.7 in.
